

(A) Linha de Base — $N_0 = 100 \mu\text{M}$
Todas as 50 replicas esporulam;
 σ_H ultrapassa θ_{σ_H} (previsto)

(B) SinR = 12 μM — $N_0 = 1440 \mu\text{M}$
Bet-hedging: σ_H similar em ambos os destinos;
comprometimento determinado pela septacao
